MOE Japan Selects New Projects of Subsidy Programme for the Joint Crediting Mechanism (JCM) Facility Introduction for FY2025 to FY2027 (Tenth and Eleventh Rounds)

▶ 日本語へ

On July 14, 2026, Ministry of the Environment (MOE), Japan, announced new projects selected for the Subsidy Programme for the JCM Facility Introduction for FY2025 to FY2027 (tenth and eleventh rounds).

MOE Japan received a variety of applications for the Subsidy Programme for the JCM Facility Introduction and selected one project each in the tenth and eleventh rounds for FY2025 to FY2027. MOE Japan will continue to strongly promote the overseas expansion of decarbonizing infrastructure through the JCM, based on the "Plan for Global Warming Countermeasures (Cabinet decision in February 2025)" and others.

1. JCM Outline

- Since 2013, Japan has established the JCM with 32 partner countries, and over 300 projects have been selected under the Programme. The JCM's 32 current partner countries are: Mongolia, Bangladesh, Ethiopia, Kenya, Maldives, Vietnam, Laos, Indonesia, Costa Rica, Palau, Cambodia, Mexico, Saudi Arabia, Chile, Myanmar, Thailand, Philippines, Senegal, Tunisia, Azerbaijan, Moldova, Georgia, Sri Lanka, Uzbekistan, Papua New Guinea, United Arab Emirates, Kyrgyz Republic, Kazakhstan, Ukraine, Tanzania, India and Oman.

- The JCM aims to reduce greenhouse gas (GHG) emissions in developing countries and others by utilizing advanced decarbonizing technologies. Under the JCM scheme, Japan is facilitating the diffusion of leading decarbonizing technologies and infrastructure, etc. as well as the implementation of mitigation actions in partner countries. The JCM contributes to the achievement of Japan’s and partner countries' Nationally Determined Contributions (NDCs) while ensuring the avoidance of double counting through corresponding adjustments consistent with Article 6 of the Paris Agreement.

- These JCM activities are in accordance with the "Plan for Global Warming Countermeasures (Cabinet decision in February 2025)" and so on.
(For further information on the JCM: https://www.jcm.go.jp/)

2. Subsidy Programme for the JCM Facility Introduction Outline

- Subsidy Programme for the JCM Facility Introduction of MOE Japan provides financial support of up to 1/2 of the initial investment cost for projects. Representative participants in the Projects shall conduct measurement, reporting, and verification (MRV) of GHG emission reductions. In addition, this financing support programme is expected to contribute to global decarbonization by disseminating and deploying advanced decarbonizing technologies while ascertaining in detail the needs of partner countries.

3. Outline of Newly Selected Project of Subsidy Programme for the JCM Facility Introduction

- Applications for the "Subsidy Programme for the JCM Facility Introduction" in FY2025 to FY2027 by the Global Environment Centre (GEC, an implementing organization) were open from April 7 to September 30, 2025.

- In the tenth and eleventh rounds of the selection process in FY2025 to FY2027, MOE Japan selected two new projects based on the results of an initial document screening, secondary review through interviews, acceptance/rejection review and confirming that there is ‘no objection’ raised by the Joint Committee of respective partner countries. MOE Japan will carry out the procedures for the implementation of the JCM with partner countries.

< Project selected in the tenth round for FY2025 to FY2027 >

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
11	Cambodia	50MW Biomass Power Plant Project in Kampong Speu Province	erex Co., Ltd.	75,669
	[Outline of the project] - This project introduces a 50MW biomass power plant in Kampong Speu Province. The generated electricity is sold to the state-owned power company, the Electricity of			

	Cambodia (EDC). - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.

< Project selected in the eleventh round for FY2025 to FY2027 >

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
12	Tunisia	75MW Onshore Wind Power Project in El Fahs Region	Eurus Energy Holdings Corporation	88,367
	[Outline of the project] - This project introduces an onshore wind power firm in the El Fahs region. The generated electricity is supplied to Tunisian Company of Electricity and Gas (STEG). - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
1	Georgia	43MW Solar Power Project in Kakheti and Kvemo Kartli Regions	Sharp Energy Solutions Corporation	21,501
	[Outline of the project] - This project introduces solar power generation facilities with a total capacity of 43MW			

	(31MWx1site + 2MW x 6 sites) in the regions of Kakheti and Kvemo Kartli, near the Tbilisi city. - Electricity generated is sold either to the national grid or on the spot market. This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
2	Philippines	Rehabilitation Project of Power Generation System at Palinpinon Geothermal Power Plant	ITOCHU Plantech Inc.	37,180
	[Outline of the project] - This project replaces two aged 37.5MW steam turbines with 42MW turbines with higher efficiency to improve power generation efficiency and expand capacity at the Palinpinon geothermal power plant, which has three steam turbines, in Negros Island. The additional electricity generated is sold to electric power companies through grid. - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
3	Thailand	Energy Supply Project by 55MW Solar Power System and 40MWh Storage Battery to Data Center in Chon Buri Province in the Eastern Economic Corridor	Sharp Energy Solutions Corporation	25,350

	[Outline of the project] - This project introduces a ground-mounted 55MW solar power system with 40MWh storage battery in a data center in the Chon Buri Province in the southeastern part of the Kingdom of Thailand. All the generated electricity is supplied to the data center. - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.			
4	Cambodia	30MW Solar Power and 11MWh Storage Battery Project in Krakor, Pursat Province	MinebeaMitsumi Inc.	21,423
	[Outline of the project] - This project introduces a 30 MW ground-mount solar power plant equipment with a 11MWh storage system in Krakor, Pursat Province. The generated electricity is sold to the state-owned power company, Electricite de Cambodge (EDC). - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
5	Chile	14MW Solar Power and 40MWh Storage Battery Project in O'Higgins and Maule Region	Farmland Co., Ltd.	10,310
	[Outline of the project] - This project introduces a 14MW solar power and a 40MWh battery system at 3 sites in O'Higgins and Maule regions and supplies the electricity through a Chilean power distribution company. - This project supplies renewable energy and charges the excess in the battery system during the daytime, and supplies the excess during the nighttime to reduce greenhouse gas (GHG) emissions.			

[Reference 6] Project selected in the fifth round (January 9, 2026)

No.	Partner	Project Name	Representative Participant	Estimated GHG

	Country			Reduction (t-CO2/year)
6	Indonesia	Introduction of 3.6MW Solar Power and 15MWh Storage Battery to Beverage Plant	Otsuka Holdings Co., Ltd.	3,085
	[Outline of the project] - This project introduces a 3.6MW solar power system with a 15MWh battery storage facility to a beverage plant in Sukabumi Regency. Electricity generated by solar panels during the daytime is mostly stored in battery systems and consumed at the plant during the nighttime. - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.			

[Reference 7] Project selected in the sixth round (February 13, 2026)

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
7	Laos	66.8MW Solar Power and 15MWh Storage Battery Project in Savannakhet Province	Sharp Energy Solutions Corporation	29,812
	[Outline of the project] - This project introduces a 66.8MW ground-mounted solar power system with a 15MWh storage battery facility in Savannakhet Province. - Electricity generated by the solar system is sold to the state-owned power company (EDL). A part of electricity generated during daytime is stored in the battery and supplied to the grid during evening peak demand periods. - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy and contributes to stabilization of power supply in the country.			

[Reference 8] Project selected in the seventh round (February 20, 2026)

https://www.env.go.jp/en/press/press_01289.html

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
8	Tunisia	130MW Solar Power Project in Gabès Region	Marubeni Corporation	82,656
	[Outline of the project] - This project introduces solar power generation facilities with a total capacity of 130MW in Gabès region. The generated electricity is sold to the Tunisian Company of Electricity and Gas (STEG). - This project reduces greenhouse gas (GHG) emissions by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy.			

[Reference 9] Project selected in the eighth round (May 22, 2026)

https://www.env.go.jp/en/press/press_01770.html

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
9	Thailand	Energy Supply Project to Supplier by 40MW Solar Power +39MWh Storage Battery in Kanchanaburi Province	Shin-Etsu Chemical Co., Ltd.	16,014
	[Outline of the project] - This project introduces a 40 MW ground-mount solar power plant system with a 39MWh storage system to a Silicon metal production factory in Kanchanaburi Province. All the generated electricity is consumed at the factory. - This project reduces greenhouse gas (GHG) emissions from local suppliers by replacing part of the electricity from the fossil fuel-derived grid power with renewable energy and contributes to reducing Scope 3 emissions of Shin-Etsu Chemical Group.			

[Reference 10] Project selected in the ninth round (May 29, 2026)

https://www.env.go.jp/en/press/press_02098.html

No.	Partner Country	Project Name	Representative Participant	Estimated GHG Reduction (t-CO2/year)
10	Sri Lanka	Introduction of Cold Chain Technologies in Northern Province	SETTSU WAREHOUSE Co., Ltd.	3,772
	[Outline of the project] - This project aims to establish an integrated cold chain in the Northern Region by introducing refrigerated transport facilities, including energy-efficient refrigerated and frozen trucks, solar power generation facilities equipped with battery storage systems, and high-efficiency refrigerated and frozen facilities coated with heat-reflective paint. This project consumes renewable energy within the own cold chain and a part of electricity generated during daytime is stored in the battery and consumed during evening periods for an efficient use of renewable energy. - By replacing part of the electricity derived from fossil fuels with renewable energy and reducing energy consumption throughout the cold chain, the project will reduce greenhouse gas (GHG) emissions.
